

A project should guarantee functionality, safety and adequate costs to the product. These are also our goals, which we are committed to achieving by adopting the most advanced design, modeling and simulation technologies in all the fields in which we operate. This commitment is second only to the care we put into our projects and the growth of our staff

That's why we decided to set up an ISO 9001:2015 Quality Management System geared towards the continuous improvement of our services and of the value generated for our stakeholders

1

### Teamwork

We support collaboration and a strong involvement and commitment at all levels of the organization

2

### Quality and accuracy of services

We assure a high level technical preparation of our staff and the use of cutting-edge software

3

### Attention to customer needs

We guarantee the utmost professionalism and commitment in delivering a service that meets their requirements

To achieve company objectives it is essential that everyone in Streamline is aware of the importance of its contribution to the provision of a high level technical service and to the continuous improvement of company performance; only under these assumptions we will be able to offer our customers the maximum level of efficiency. For this reason, Streamline undertakes to:

- accurately identify the **needs** and **expectations** of its customers to be able to better respond to their requirements
- demonstrate **flexibility** and **availability** in adapting to customer requests and to a constantly evolving environment
- cultivating distinctive **skills**, in order to offer **innovative** and increasingly competitive services
- guarantee an optimal commitment of human resources through individual responsibility, **valorization** and **development** of individual skills
- enhance employees, offering them **training** and growth paths that enrich their **skills** and **experience**
- develop **partnerships** that allow us to offer our customers products and services that meet the highest quality standards available on the market
- carefully select **high-level suppliers** to ensure that their services are of the highest quality
- constantly guarantee the presence of the **necessary resources** to achieve the objectives set for continuous improvement
- operate in compliance with the **applicable national and international requirements** and regulations
- improve its business management system, through a periodic **analysis** of the **context** in which the company operates and of the **expectations** of its **stakeholders**, in order to make it an increasingly effective tool for **risks management** and **opportunities identification**
